Awning Care and Operation

SASH OPERATOR – Rotate counter clockwise to open, clockwise to close. NEVER operate with security locks engaged. DO NOT overtighten; this may damage the closure mechanism.

Operating and Cleaning Instructions

Easy To Open/Easy To Close

To **open** the Oxford Awning Window, first flip up both security locks. Then simply rotate the operator **counter clockwise** until sash is opened to desired position.

To **close**, rotate operator **clockwise** until sash gently contacts awning frame. Then flip down security locks to fully seal operating sash.

DO NOT OVERTIGHTEN SASH WITH OPERATOR CRANK. THIS MAY RESULT IN DAMAGE TO CLOSURE MECHANISM.

Screens Add To Security

Each Oxford Awning Window features a non-corroding fiberglass cloth screen that slips in and out easily.

Simply disengage the screen-locks and remove.

Cleaning To Maintain Good Looks

Clean the glass in your Oxford window with any glass cleaner, or simply use plain water.

The vinyl will require routine cleaning. Use a mild detergent for light soil. For heavily soiled areas a cleaner with mild abrasive is suggested. (Do Not Use On The Glass.)

SECURITY LOCKS - Flip up to unlock, flip down to lock. Use security lock(s) to fully seal operating sash.

Awning Routine Maintenance

Important Note: Periodically clean any debris buildup off sill track. The operating sash must be in open position to perform this cleaning. Inspect the weepholes on outside of window to see they are not clogged. If this maintenance is not done, water leakage may occur. In addition, failure to perform this maintenance could void your warranty.
